

# Easy A/B Testing with GrowthBook & ClickHouse

Graham McNicoll - March, 2025  
ClickHouse Meetup San Francisco

# Hi, I'm Graham

Co-Founder of GrowthBook

Most popular open source A/B testing platform. Huge Clickhouse fan.

Y Combinator (2022)

## Talk outline

- Briefly, what is A/B testing (if needed)
- Why you should A/B test
- How you can use ClickHouse and GrowthBook for enterprise A/B testing
- Real-time flag status using ClickHouse (if time)

**What is A/B testing?**

What is A/B testing?

**A/B testing is a controlled way of measuring the impact of changes on real users**

# A/B testing components

The basic components of running an A/B test

## Hypothesis

Come up with an idea  
you want to test

BECOME A HOST

# Host your entire place for 4 guests in Toronto and earn up to **\$2,204 CAD** a month

Get started

Winner!

**Why A/B Test?**

# How often do A/B tests win?

# Industry A/B test success rates

Company	Experiment Success Rate
Microsoft	33%
Bing	15%
Booking.com	10%
Netflix	10%
Google Ads	10%
AirBnB Search	8%

# Why A/B testing?

Controlled experiments provide a clean and simple way to measure the impact of changes. Without this controlled setting, it's surprisingly hard to determine success or failure.

Example showing how hard it can be to determine causal relationships between product changes and metrics without a control. This product failed even though the raw numbers increased - AirBnB 2014

So why A/B test?

**Without testing, you're guessing**

# A/B Testing Program Sophistication

## CRAWL

### Basic Analytics

Some visibility into user performance

## WALK

### Optimizations

Manual A/B tests, optimizing some parts of your product

## RUN

### Common Experimentation

Important features are tested, may have a growth team or data teams.

## FLY

### Ubiquitous Experimentation

A/B testing is the default for every feature. Tests can be run and read by anyone

Experimentation Sophistication

Wilderness

Self-build

Plenty of tools here

Company Size

# Unlocking Ubiquitous Experimentation

To get to the point where you can test everything, platforms have to:

- Enable self service use, making it stupidly simple
- Bring the incremental cost per experiment down to zero
- Adjust to a company's data & metrics
- Scale to your event volume

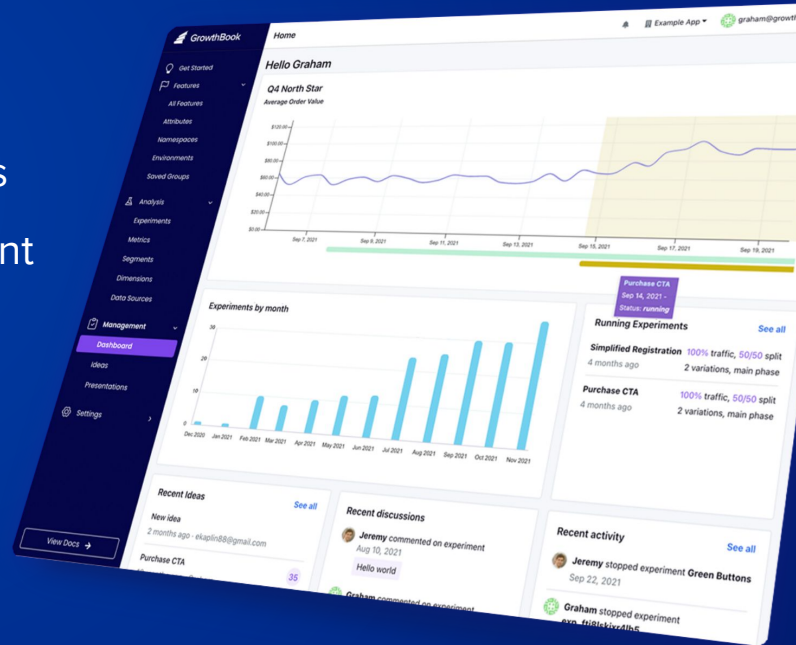

Top companies built their own systems to achieve this.

The good news is that with ClickHouse, you're almost there.

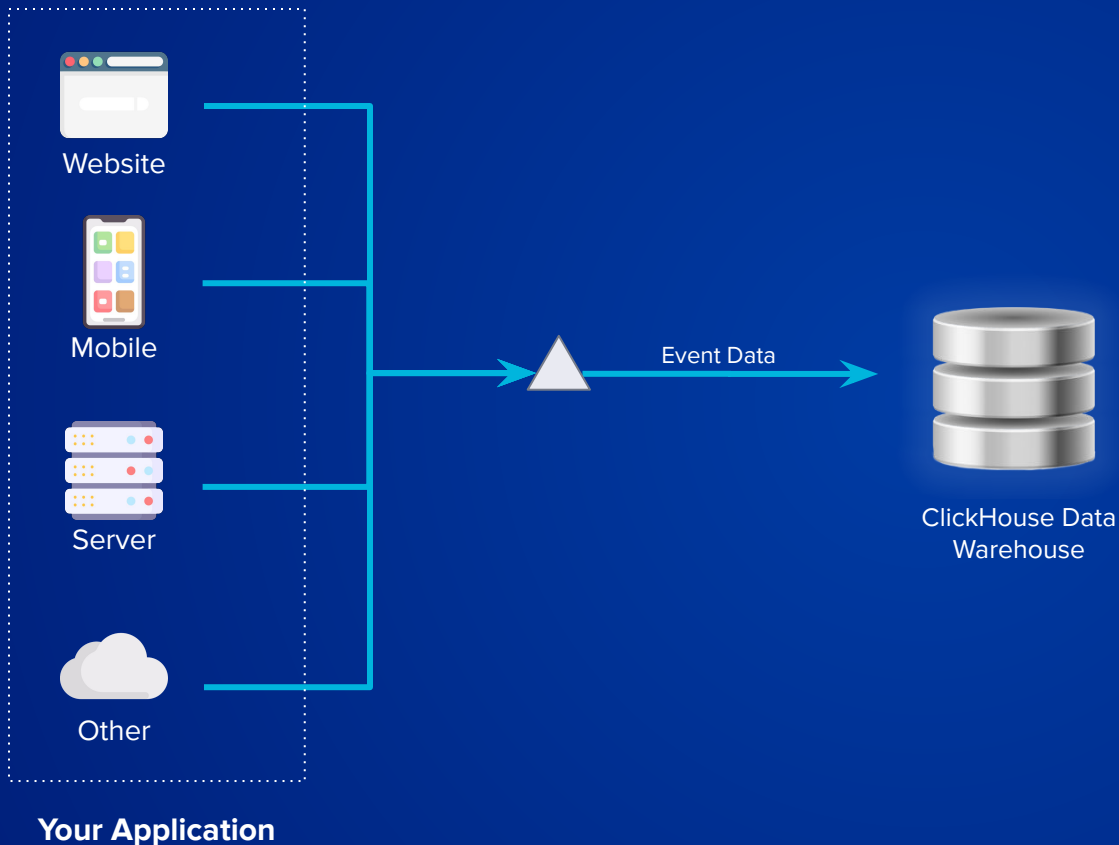

# A/B Testing with ClickHouse and GrowthBook

# GrowthBook is an open core platform for **A/B testing** and **feature flagging**

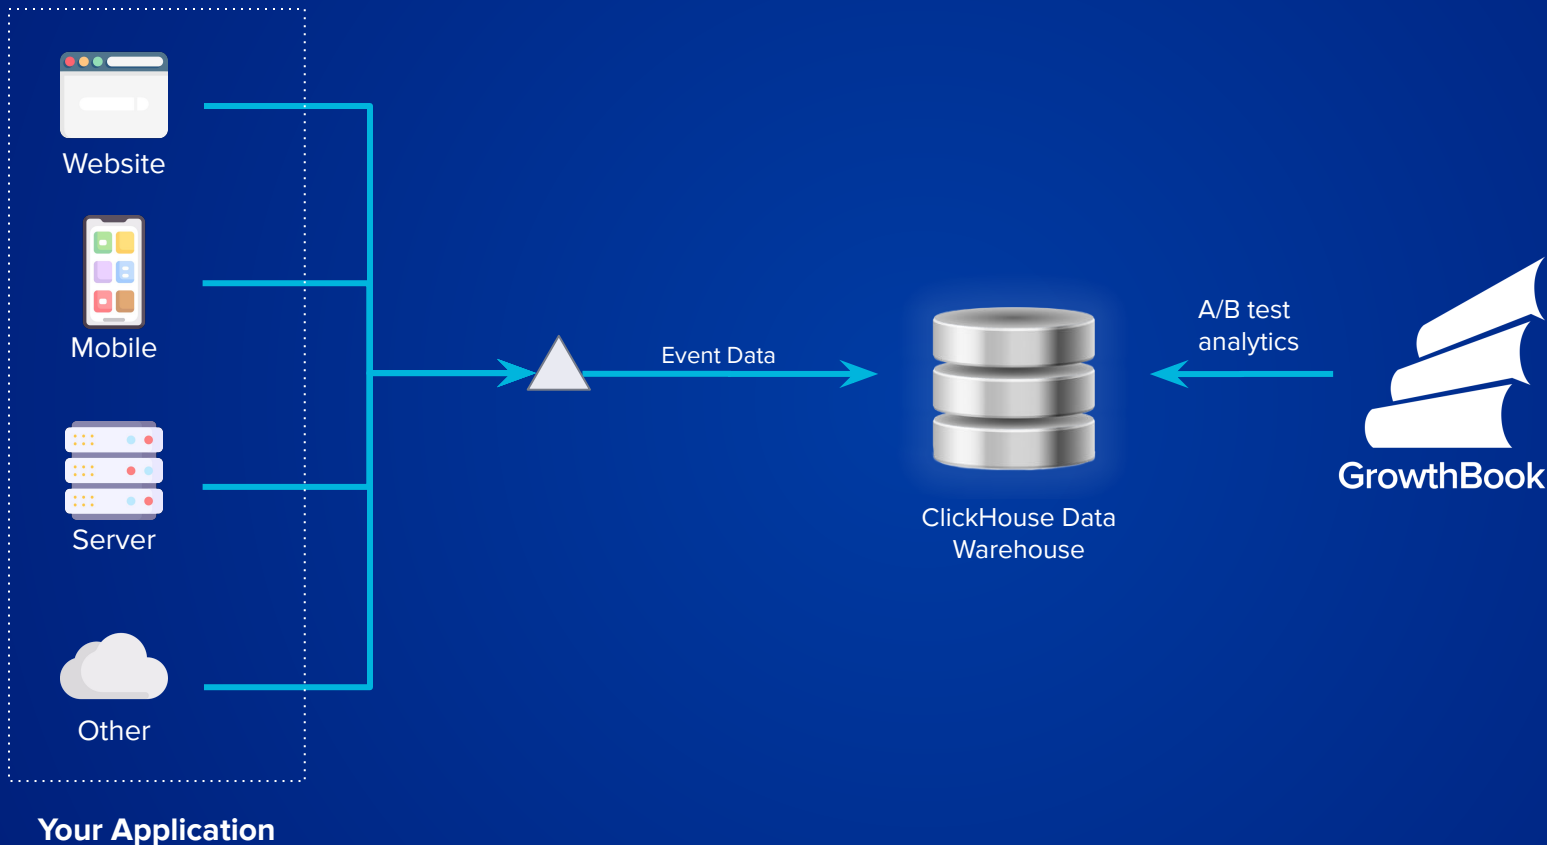

- Warehouse native A/B testing statistics analytics
- Feature flagging for A/B test variation assignment
- In-house platform you don't have to build

# ClickHouse data warehouse as source of truth
